

BPL IS DANGEROUS operating from 9-30mhz....as it will be quantifying and defining widespread NOISE with a rubber stamp..It will be a financial & strategic ""PR"" Boon to Power Companies that have been successfully blaming their cracked insulators and power line noise on others...Hams & SWLs will NEED to have FREE access to those pesky BPL Modems for SHUT-DOWN and Mitigating Dynamic & Remote Noise-band switchout capability which further hassles & complicates the operator position..EVEN if they ARE NOT SUBSCRIBERS!!Note That KEY POINT not mentioned anywhere else EVEN IF THEY ARE NOT SUBSCRIBERS!!!!Another probability will be hams sending out RF signals say 10kc each side of operating frequency to activate Auto-Transfer-of-Info sequence on local area BPLs to ease circumvention of automated inconvenience....DO NOT FORGET PROPAGATED HIGHER NOISE FLOOR and the request STATED IN THE AMENDED DOCKET 04-29 the ""BPL PROPONENTS are ASKING HAMS TO TURN THEIR ANTENNAS AWAY FROM NOISY POWER LINES, "" like all power lines generate noise WHICH IS TOTALLY FALSE!!Turning my antennas away from west would knock out 95% of all my contacts...It is a total CROCK and may indeed have LONG LASTING LONG TERM NEGATIVE Economic and Possible Health concerns to follow as I personally don't care to be bombarded with any more "unwarranted" Unnecessary Low-Level RF when I am doing my gardening...Nobody I know wants it...I think the idea should be SHRUNK DOWN to Transmitting the Junk on Power Lines OUTSIDE Dark CITIES, and then Use conventional 75ohm Pipe to carry it into the particular homes & businesses from there! Just leave it alone please.. Beyond Disgusted, VJSJR WN1S
